Identifiers-Educational Opportunities Survey, EOS

This report analyzes the reponses of students to questionnaires administered as part of the Educational Opportunities Survey (EOS). The purposes of these analyses were (1) to present the number and percent of students responding to each questionnaire item alternative, (2) to determine the number of students who failed to answer each question, (3) to serve as a guideline in developing codes to scale the items for future analysis, and (4) to serve as a guideline in estimating missing data. The questionnaire responses are from students in grades 1, 3, 6, 9, and 12. Related documents are ED 017 996, ED 017 997, and EA 001 683. (HW)

Item Response Analyses of the Educational Opportunities Survey Student Questionnaires

INTRODUCTION AND PURPOSE

The following report presents analyses of questionnaire item responses from the student questionnaires administered as part of the Educational Opportunities Survey (EOS). These analyses were conducted in order to: (1) present the number and percent of students responding to each questionnaire item alternative; (2) determine the number of students who failed to answer each question; (3) serve as a guideline in developing codes to scale the items for future analyses and; (4) serve as a guideline in estimating missing data.

DEVELOPMENT OF THE ACHIEVEMENT COMPOSITES

One of the most important objectives of these analyses was to see in what manner responses to the different alternatives for a question related to one or more variables of interest. Such an analysis would enable an investigator to uncover non-linear relationships of the responses with the variable of interest and to determine a value to be assigned to those students who failed to answer the question. (Similar kinds of analyses have been conducted for the teacher and principal questionnaires, see Technical Notes 32 and 58 in the List of References.) In order to accomplish this analysis a single composite measure of Achievement was developed from the tests that were administered as part of the survey. A detailed description of these tests and examples of types of items are given in the earlier report (see Coleman, et al., 1966, p. 575). As is shown in Table 1, more tests were administered at the higher than at the lower grade levels.

The intercorrelations of the tests for the different grade levels are given in Table 2. Test correlations for the twelfth and sixth grade are given below the main diagonal (running from the upper left to the lower right) and for the ninth and sixth grades, above the main diagonal of their respective table entries. Inspection of the correlations shows that they are in the moderate to high range (.50 to .80) for the ninth and twelfth grades and the low to high range (.30 to .80) for the sixth and third grades.

The test intercorrelations appeared high enough to suggest that they were measuring to a large extent, a common attribute. In order to test this supposition a principal components analysis was employed (Horst 1965). Principal Component analysis attempts to express what is common to a set of variables by a smaller number of more basic components. If a strong first principal component was found among the intercorrelations of these tests, then a single index of achievement could be created by weighting each student's scores on the tests by their principal component weights and then summing them.

TABLE 1

Number and Kind of Tests Administered at the Different Grade Levels

Test	Grade				
	12	9	6	3	1
Verbal ability	X	X	X	X	X
Nonverbal ability	X	X	X	X	X
Reading Comprehension	X	X	X	X	
Mathematics achievement	X	X	X	X	
General information in 5 areas (Practical arts, girls; Practical arts, boys; natural sciences; social studies; humanities)	X	X			

TABLE 2

Intercorrelations of the Achievement Tests for the Different Grade Levels

Number In Matrix	Test Title	Twelfth / Ninth*				
		1	2	3	4	5
1	Nonverbal Ability	1.0000	.6039	.5900	.6158	.5955
2	Verbal Ability	.6076	1.0000	.7670	.6894	.8500
3	Reading Comprehension	.5812	.8022	1.0000	.6522	.7282
4	Mathematics Achievement	.5602	.6016	.5584	1.0000	.7058
5	General Information	.5995	.8115	.7059	.6193	1.0000

*The twelfth grade intercorrelations are below the main diagonal and the ninth grade above the main diagonal. The correlations for the twelfth grade are based upon 96,409 observations and 133,136 for the ninth grade.

	Test Title	Sixth / Third*			
		1	2	3	4
1	Nonverbal Ability	1.0000	.3775	.4284	.4513
2	Verbal Ability	.5958	1.0000	.4608	.4745
3	Reading Comprehension	.5879	.7947	1.0000	.5870
4	Mathematics Achievement	.5953	.7369	.7280	1.0000

*The sixth grade intercorrelations are below the main diagonal and the third grade above the main diagonal. The correlations for the sixth grade are based upon 123,386 observations and 129,774 for the third grade.

	Test Title	First*	
		1	2
1	Nonverbal Ability	1.0000	.6420
2	Verbal Ability	.6420	1.0000

*The correlations for the first grade are based upon 71,460 observations.

Table 3 gives the first principal component weights for the different grade levels and the percent of variance accounted for by each component. The percent of variance accounted for is computed utilizing a theorem from matrix theory which states that the trace of a matrix (i.e. the sum of its diagonal elements) is equal to the sum of its roots, (i.e. the total variance of the matrix). Since there are one's in the diagonal of the correlation matrix, the trace is equal to the number of variables. Consequently, dividing the amount of variance for each factor by the number of variables, one obtains the proportion of total variance attributable to a principal component. Table 3 shows that the first principal component for grades twelve, nine and six account for about 75 percent of the total variance at each grade level. Since this is a relatively large percent for this kind of data, it indicates that a single index of achievement can be used. The weights used to obtain this index or composite score were the principal component weights in Table 3 (with the exception of the first grade where unit weights were used).

If these weights were very different for different regional and racial groups then the same set of weights could not be used for the various groups. Analyses were conducted for different regional and racial groups and the comparison of results showed that the weights were highly similar and consequently that a single set for each grade level would be appropriate. These analyses are given in detail in an earlier note (see Mayeske and Weinfeld, Technical Note No. 21).

The first principal component, accounting for most of the variance among the tests, can be interpreted to be "general scholastic ability or achievement." It is that attribute which is common to the tests. The composite score developed using these weights similarly represents "general scholastic achievement."

DISCUSSION OF SOME SELECTED RESULTS

Analyses of responses to the questionnaire item which asked the student to indicate his father's occupation will be used to indicate the meaning of the results and some of the trends in the data. For the first through twelfth grades the questionnaire numbers for these items are respectively: 12; 51; 12; 18; 18.

Table 4 presents the percent of students who indicated that their fathers were employed in a particular occupational category. These percentages show some fluctuations particularly at the sixth and higher grade levels. These fluctuations may be due in part to the fact that the teacher filled out the questionnaire for the students at the first grade and for some of the items at the third grade; in part to the slight changes in wording of some of the examples at the sixth grade, and in part to the tendency of

TABLE 3

Test Weights for the First Principal Component of the Test Intercorrelations

		Principal Component Weights				
	Test Title	Twelfth	Ninth*	Sixth	Third	First*
1	Nonverbal Ability	.7780	.7553	.7860	.7150	.9068
2	Verbal Ability	.9120	.9175	.9050	.7410	.9068
3	Reading Comprehension	.8690	.8732	.9000	.8100	——
4	Mathematics Achievement	.8480	.8505	.8830	.8240	——
5	General Information	.9050	.9117	——	——	——
	Percent of Variance Accounted for by the First Principal Component	74.60	74.63	75.70	59.90	82.23

*The weights for the ninth grade were computed on a desk calculator and consequently fewer iterations were computed than for grades three and six which were calculated on a computer. With only two variables the weights for the first principal component will be the same. The weights for the first grade are from one iteration (viz.the first centroid weights).

TABLE 4

Percent of Students Classified by Their Response to Father's Occupation

Category	Father's Occupation	Percent of Responses First	Third	Sixth	Ninth	Twelfth
1	A. Technical	2.3	1.8	2.1	2.8	2.2
2	B. Official	1.2	1.4	6.6	4.1	3.5
3	C. Manager	6.8	6.8	6.2	12.6	13.9
4	D. Semi-skilled	22.2	20.5	12.0	16.6	17.5
5	E. Salesman	3.9	3.7	4.7	4.3	3.7
6	F. Farm or ranch manager or owner	3.6	4.9	3.5	3.8	6.8
7	G. Farm worker	2.8	2.8	3.3	2.4	2.6
8	H. Workman or laborer	16.1	17.7	15.2	10.5	12.1
9	I. Professional	7.3	6.6	9.3	6.7	7.0
10	J. Skilled worker or foreman	16.1	17.7	17.5	20.1	22.4
11	K. Don't know	11.7	9.7	13.8	10.8	4.9
0	Non-response	6.2	6.4	5.8	5.2	3.3
	Total	100.0	100.0	100.0	100.0	100.0

of older students to choose an occupational category for their father that has slightly higher prestige or social standing (e.g. Manager and Workman). It is also of interest to note that the percent of students who do not know their fathers occupation or who did not respond to the question show a slight decline for the higher grade levels (except for the sixth graders).

In scanning the percent of students who fail to respond to a question there is a tendency for a larger percentage of students to fail to respond to questions that are closer to the end of the questionnaire. For example, at the ninth grade the average percent non-response for the first, second, third and fourth group of 26 questions are:

Block of Questions	Average Percent Non-Response
First 26	2.22
Second 26	2.00
Third 26	3.52
Fourth 26	6.69

Table 5 presents the mean Achievement composite scores for students at the different grade levels who indicated that their father was employed in a particular occupational category. The overall mean for each grade level has been set at 50 with a standard deviation of 10. The standard deviation for each occupation is given in the main body of the report, each question being under its appropriate grade level. It is of particular importance to note the trend of the Achievement means for the "Don't know" and "Non-response" categories. The non-response means for the first and third grades are very close to the total mean of 50 while the non-response means for the sixth, ninth and twelfth grades are progressively lower. Thus, in estimating missing data, to assign the mean score of the respondents on an item to students for whom a response was not available would not introduce many systematic distortions at the first and third grade but would do so to a considerable extent at the higher grade levels. This is because at the higher grade levels respondents systematically differ in their achievement from the non-respondents and consequently their mean is not a good description of the non-respondents.

One can also note a trend for the mean of the "Don't know" responses to become lower at the higher (sixth, ninth and twelfth) grade levels. Students who don't know their father's occupation at the higher grade levels have lower relative achievement than those students who don't know their father's occupation at grades one and three.

Table 6 gives the rankings of the achievement means from Table 5. The rankings are from high to low, hence a high score indicates a high value. There is a pronounced tendency for a high ranking occupation at one grade

TABLE 5

Average Composite Achievement Scores of Students Classified by Father's Occuaption

		Means*for the Different Grade Levels				
Category	Father's Occupation	First	Third	Sixth	Ninth	Twelfth
1	A. Technical	52.254	54.368	48.728	52.674	52.379
2	B. Official	53.613	54.481	52.766	52.299	52.653

0	Non-response	49.031	48.787	45.002	42.599	42.338
	Total	50.000	50.000	50.000	50.000	50.000

---

*A technical exposition of a technique called criterion scaling that uses these means as codes or scale values is given in an earlier report in this series (see Weinfeld, et al., Technical Note Number 51 in the List of References.)

TABLE 6

Rankings of Average Composite Achievement Scores of Students Classified by Father's Occupation

Category		Father's Occupation	Ranks of the means for the different grade levels*				
			First	Third	Sixth	Ninth	Twelfth
1	A.	Technical	7	9	4	9	8
2	B.	Official	10	10	9	8	9
3	C.	Manager	9	11	10	10	10
4	D.	Semi-skilled	5	5	6	5	5
5	E.	Salesman	11	8	11	11	11
6	F.	Farm or ranch manager or owner	8	7	7	6	7
7	G.	Farm worker	2	1	3	3	3
8	H.	Workman or laborer	3	3	5	4	4
9	I.	Professional	12	12	12	12	12
10	J.	Skilled worker or foreman	6	6	8	7	6
11	K.	Don't know	1	2	1	2	1
0		Non-response	4	4	2	1	2

*Rankings are from high to low, hence a high score indicates a high value.

level also to have a high ranking at the other grade levels. The most consistent ranking is for "Professional" which retains the highest ranking at all the grade levels. Table 7 presents the correlations of the rankings for one grade level with the rankings at the other grade levels. These correlations represent the consistency in these rankings. A high correlation represents a high degree of consistency.

TABLE 7

Intercorrelations of the Rankings of the Average Composite Achievement Scores

	First	Third	Sixth	Ninth	Twelfth
First	1.00	.93	.91	.91	.96
Third	.93	1.00	.81	.89	.92
Sixth	.91	.81	1.00	.89	.92
Ninth	.91	.89	.89	1.00	.98
Twelfth	.96	.92	.92	.98	1.00

In looking down the columns of Table 7 one can note that the twelfth grade rankings are more highly correlated with each of the other rankings than is the case for any other grade level. The next highest is for the first grade, then the ninth, third and sixth respectively. Consequently, if one wanted to use a ranking that was most characteristic of all the grade levels the twelfth grade ranking would be most appropriate.

FORMAT OF TABULATIONS

Table 8 shows the format for the ninth grade tabulations presented in the main body of this report. The actual question used in the questionnaire along with the various response alternatives labeled (A), (B), (C), etc., is presented directly beneath the computer tabulations. The column labeled CATEGORY contains the various responses alternatives. Thus, category 1 refers to the first response alternative which is labeled (A). The arrows and lines in Table 3 attempt to show the appropriate categories for the various response alternatives. In addition, the number of persons who failed to respond (NR) to that item is indicated by the category numbered zero (0).

TABLE 8

Format For The Tabulations

Q XX

CATEGORY	NUMBER	WEIGHTED NUMBER	WEIGHTED PERCENTAGE	COMPOSITE MEAN	STD. DEV.
1	XXXX	XXXX	XXXX	XXXX	XXXX
2	XXXX	XXXX	XXXX	XXXX	XXXX
3	XXXX	XXXX	XXXX	XXXX	XXXX
0 Non-Response	XXXX	XXXX	XXXX	XXXX	XXXX
TOTAL	133,136	3,021,476	100.0	50.000	10.000

Question XX

(A) Question response alternative 1
(B) Question response alternative 2
(C) Question response alternative 3

The column labeled NUMBER gives the number of persons in the sample who chose each response alternative (categories 1, 2 and 3) and those who failed to respond (category 0). The reader will note that there was a TOTAL of 133,136 9th grade students in the sample.

These values were then inflated using sampling weights so that they correspond to the number of 9th grade students. The values are given in the column labeled WEIGHTED NUMBER. The reader will note that there is an estimated TOTAL of 3,021,476 9th grade students in the U.S. There were two different sets of sampling weights used in the EOS study. The school sampling weights were used to reproduce school population values and the student sampling weights to reproduce student population values. For the 9th grade, however, these two sets of weights are almost identical and reproduce very similar population values. For the tabulations in this analysis it was more convenient to use the school sampling weights for the ninth grade (and student sampling weights for the other grade levels).

The percent responding to each alternative was computed from these inflated numbers and is given in the column labeled WEIGHTED PERCENTAGE. These percentages sum to a TOTAL of 100.

The composite scores, the weighted sum of the five tests, were standardized to a mean of 50 and a standard deviation of 10. Using these standardized scores the means and standard deviation for each item or question response alternative was computed. These computations are given in the column labeled, COMPOSITE, MEAN, and STD. DEV.

Consider the ninth grade tabulations of the first question in the main body of the report, Question 3, Sex, as an example. Of the total sample of 133,135 9th grade students, 66,313 indicated they were male, 64,677 indicated they were female and 2,145 failed to respond to that question. Using the school sampling weights to inflate these values we note that there are an estimated 1,529,661 male and 1,456,929 female 9th grade students. In percentage values, 50.6 percent are male and 48.2 percent are female. Although the non-respondents for the first question represent only 1.2 percent, a great deal is learned about them by comparing their average (or mean) composite scores and standard deviations with those who did respond. Thus, one can note that females have a slightly higher verbal score (50.527) than males (49.760) and that their standard deviations are quite similar. However, the non-respondents have a composite score (38.511), that is about 11 to 12 points below that for males and females and they are more heterogeneous in terms of their composite score as indicated by their standard deviation of 11.578. This larger standard deviation indicates that there are diverse reasons for their failure to respond to this question. In view of their heterogeneity and small number, one might decide to exclude them from future analyses.

Due to the present limitations of computer capacity the first two questions of the 9th and 12th grade student questionnaires were not tabulated. The tabulations for these grade levels begin, therefore, with Question 3. The numbers and percentage responses for each item alternative as well as the average composite scores are presented here for the first time. Special tabulations were made separately for students going to school in the Standard Metropolitan Statistical Areas (SMSA) and those outside these areas (Non-SMSA). These tabulations are available but have not been appended to this report because they do not yield much additional information.

The tabulations are organized by grade level starting with the first grade tabulations then for the third grade, sixth, ninth and twelfth respectively. Not all of the same questions were asked at each grade level. There are fewer questions at the lower than at the higher grades and some of the questions at the first grade level pertain to classroom behavior as seen by the teacher.

CAUTIONS ON INTERPRETING FINDINGS

Misclassification of Minorities

Children were classified by race and ethnicity on the basis of their responses to questionnaire items. Because of response error, some misclassification arose. This misclassification was probably least serious at grades 1 and 12, for at grade 1 the teacher completed the questionnaire, and at grade 12, the students were less likely to make a response error. It was probably greatest at grade 6, which was the first grade at which the child himself both read the questions and checked the responses.

This misclassification is least serious for Negroes and whites, for the error responses constitute only a small fraction of the total for each of these groups, and also because a child was classified as Negro or white only if he did not check that he was Puerto Rican or Mexican-American on the question referring to ethnicity. It is probably greatest for Puerto Ricans and Mexican-Americans. The anonymity of the pupil data made it impossible to check or eliminate incorrectly classified individuals. As a consequence the percentages for Puerto Ricans, Mexican-Americans and Indian Americans for grades three and six on the race-ethnicity question schould be interpreted with caution.

Causal Interpretations

The reader may find many relationships in these analyses that are germane to his particular interest. The reader is cautioned not to attribute causation to the differences in achievement levels for the item responses because these differences may be due to many different interacting factors.

18. What work does your father do? You probably will not find his exact job listed, but check the one that comes closest. If he is now out of work or if he's retired, mark the one that he usually did. Mark only his main job if he works on more than one.

(A) Technical—such as draftsman, surveyor, medical or dental technician, etc.
(B) Official—such as manufacturer, officer in a large company, banker, government official or inspector, etc.
(C) Manager—such as sales manager, store manager, office manager, factory supervisor, etc.
Proprietor or owner—such as owner of a small business, wholesaler, retailer, contractor, restaurant owner, etc.
(D) Semiskilled worker—such as factory machine operator, bus or cab driver, meat cutter, etc.
Clerical worker—such as bankteller, bookkeeper, sales clerk, office clerk, mail carrier, messenger, etc.
Service worker—such as barber, waiter, etc.
Protective worker—such as policeman, detective, sheriff, fireman, etc.
(E) Salesman—such as real estate or insurance salesman, factory representative, etc.

96. Here is a list of the kinds of job training courses vocational students take in schools around the country. Mark the number of the program that comes closest to the one you are taking the most work in during high school.

01. Agriculture
02. Air conditioning
03. Airplane mechanics
04. Auto body mechanics
05. Automotive mechanics
06. Brick or stone masonry
07. Cabinet making
08. Carpentry
09. Commercial art
10. Cooperative office or business training
11. Cosmetology (beauty culture)
12. Diesel mechanics
13. Distributive education
14. Electricity
15. Food trades
16. Foundry
17. Industrial cooperative training
18. Machine shop
19. Maid training (domestic service)
20. Needle trades
21. Painting and decorating
22. Plumbing (pipe fitting)
23. Practical nursing (health)
24. Printing
25. Radio - TV repair
26. Sheet metal work
27. Welding
28. Other
